SUMMARY

Frontend Developer with production experience on a multi-tenant SaaS platform and a client website, working mainly with React, Next.js, TypeScript and TanStack Query. Built and deployed a full-stack social network (Next.js + Fastify, Prisma, PostgreSQL) with realtime notifications and email flows. Now learning C# and .NET. Experienced in Arabic/English localization with full RTL support.

SKILLS

Frontend	React, Next.js (App Router), TypeScript, JavaScript (ES6+), Tailwind CSS, TanStack Query, React Hook Form, Zod
Backend	Node.js, Fastify, Prisma, PostgreSQL, REST APIs, Socket.IO, session-based authentication
Tools	Git, GitHub, Postman, Figma, i18next (AR/EN + RTL)

EXPERIENCE

Frontend Developer · Davinda February 2026 – September 2026 · Latakia, Syria

- Frontend developer on **filter car**, a multi-tenant SaaS for car service businesses with 50+ modules, working with the backend team on the data layer, permissions and AR/EN localization.
- Built a **reusable CRUD hook factory** over TanStack Query that generates list, detail and mutation hooks per resource, with shared query keys, pagination and cache invalidation, replacing duplicated data-fetching code across modules.
- Built the **permission layer** that controls route guards, sidebar visibility and per-action buttons based on user role and tenant.
- Reduced initial load time by about **20%** with route-level lazy loading, code splitting and removing unused dependencies.
- Built the **activity log** with filters, turning raw before/after values into readable changes by field type.
- Delivered business modules including job cards, quotations, invoicing, payments, inventory and purchase orders.

Frontend Developer · Freelance — TheDeal (thedeal.qa) September 2025 – October 2025 · Remote

- Built the landing page and projects page of a Next.js job and project marketplace in production, working in a team with a senior developer.
- Implemented responsive, pixel-accurate interfaces from Figma with full Arabic/English and RTL support.

PROJECTS

Konekta — Full-stack social network · konekta.jafarmahmoud.sy Next.js · Fastify · Prisma · PostgreSQL

- Social network with authentication, follow system with private accounts, posts, feed, comments and **realtime notifications over Socket.IO**; deployed with live API docs.
- Fixed an N+1 query problem in the feed by batching lookups, cutting database queries from **112 to 12 per page** and response time from 1135 ms to 448 ms.
- Implemented server-side sessions so logout and password changes revoke access immediately, plus email verification, password reset and magic-link sign-in, with transactional emails delivered from a custom domain via Resend (SPF and DKIM).
- Cut database latency from **407 ms to 15 ms** by moving the database to the same region as the API server.

EDUCATION & LANGUAGES

B.Sc. Mechatronics Engineering — Latakia University, Syria

Arabic — Native · English — Intermediate (B1)
